Proportional Directional Valves with Feedback
K(B)FD/TG4V-3, 1*/2* Series
Pressures to 350 bar (5000 psi)

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/263/EEC, 92/31/EEC and 93/68/EEC, article 5. For instructions on installation requirements to achieve effective protection levels, see this leaflet and the Installation Wiring Practices for Vickers Electronic Products leaflet 2468. Wiring practices relevant to this Directive are indicated by Electromagnetic Compatibility (EMC).
General Description

Vickers proportional valves shown in this catalog are designed to provide a controlled oil flow in direct proportion to a command signal. They are available in two types; a double solenoid version that will provide reversible flow to an actuator and a single solenoid throttle version that provides a single direction of flow. Hydrostats are available for load compensation and parallel flow path modules are available that will boost the flow capacity of single solenoid throttle versions to nearly twice that of the standard valve.

Additionally, both of these valve types can be supplied with or without an integral amplifier built directly onto the valve.

**KFD/TG4V-3**

This version is supplied **without** the integral amplifier.

**Features and Benefits**

- Wide range of spool and flow rate options.
- Electronic feedback LVDT ensures accurate spool position control.
- Internal current feedback provides optimal control.
- Vibration and shock tested.
- Supported by a broad range of amplifiers and auxiliary function modules.
- Full CE electromagnetic compatibility.

**KBFD/TG4V-3**

A range of proportional directional and throttle valves with integral control electronics. Factory-set adjustments of gain, spool deadband compensation and offset ensure consistent repeatability valve-to-valve.

The only electrical inputs required are power supply (24V) and a voltage command signal of ±10 V. The amplifier is housed in a robust metal enclosure, sealed against ingress of water and other fluids. Electrical connections are via a standard 7-pin plug.

A spool position monitor pin allows the function of the valve to be electrically monitored. Ramp functions, if required, can be generated externally.

**Features and Benefits**

- Factory-sealed adjustments ensure valve-to-valve reproducibility.
- Installation wiring reduced and simplified.
- Standard 7-pin connector.
- Standard 24V DC supply with wide tolerance band.
- Standard ±10 V DC command signals.
- Valve with integrated amplifier selected, ordered, delivered and installed as one performance-tested package.
- Spool position monitor pin to help with troubleshooting.
- Simple valve removal and replacement for service (plug & play).
- Vibration and shock tested.
- Auxiliary DIN rail mounted electronic function modules available.
- Full CE electromagnetic compatibility.
- IP67 valve environmental protection rating.
- Optional valve enable function.

---

Model Code

K (B)F * G4 V - 3 - ** * ** * ** - Z - (V) - (M) - (U1) - (***) - H - * - *

1. Valve type
   K – Proportional valve

2. Integral amplifier
   B – Integral amplifier “B” series
   Omit for models without integral amplifier

3. Feedback arrangement
   F – Spool position

4. Control type
   D – Directional valve
   T – Throttle valve

5. Mounting
   G – Subplate mounted

6. Operation
   4 – Solenoid operated

7. Pressure rating
   V – 350 bar (5000 psi) on ports P, A, & B

8. Interface
   3 – ISO 4401, size 03-02-0-94
   ANSI/B93.7M-D03

9. Spool type (center condition) (see spool data, page 5)
   2 – Closed center (all ports)
   33 – P port closed, bleed A & B to T

10. Spool/spring arrangement
    B – Spring centered single solenoid valve (solenoid “B” only) Solenoid “A” for “V” version
    C – Spring centered, dual solenoid

11. Spool flow rating
    \[ \Delta p = 5 \text{ bar (75 psi)} \text{ per metering flow path, e.g. B to T. For actual maximum flow refer to power capacity envelope curves page 8).} \]
    03 – 3 L/min (0.79 USgpm) \[ \Delta \]
    07 – 7 L/min (1.85 USgpm) \[ \Delta \]
    13 – 13 L/min (3.43 USgpm) \[ \Delta \]
    20 – 20 L/min (5.28 USgpm) \[ \Delta \]
    28 – 28 L/min (7.40 USgpm) \[ \square \]
    ▲ Meter-in/meter-out
    □ Meter-out only; type 2 spool only
    △ Fine meter-in/meter-out

12. Spool metering type
    N – Meter-in and meter-out
    F – Fine meter-in and meter-out
    S – Meter-out only

13. Flow rating (“B” port flow for asymmetric spools) K(B)FDG valves only
    10 – 10 L/min (2.64 USgpm) (20N10 only)
    Omit for symmetrical spools

14. Manual overrides
    Z – No manual overrides

15. Solenoid energization identity
    (non-integral amplifier types only, omit for valves with integral amplifier)
    V – Solenoid “A” is at port “A” end and Solenoid “B” is at port “B” end independent of spool type
    Blank US ANSI B93.9 standard (energize solenoid “A”, flow symbol is (P→A)

16. LVDT plug
    (omit for valves with integral amplifier)
    M – Standard LVDT (mating plug supplied)

17. Solenoid connector
    (omit for valves with integral amplifier)
    U1 – ISO 4400/DIN 43650, non-integral amplifier type only (mating plug supplied)

18. Electrical connection (KBF valves only)
    PC7 – 7 pin connector without plug
    PE7 – 7 pin electrical plug with mating half
    PH7 – As PE7 but with pin “C” used for enable signal
    PR7 – As PC7 but with pin “C” used for enable signal

19. Coil rating
    H – 24 VDC amplifier supply

20. Port T pressure limit code
    6 – for 2C**S spools
    7 – for all other spools

21. Design number
    1* and 2* series. Subject to change

Warning
Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2-2.5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

Flow Gain Curves

K(B)FD/TG4V-3
Spool types as noted

Single flowpath (e.g. P-A) pressure drop, Δp = 5 bar (72 psi).

When using the single solenoid throttle valve version (K*FT) a parallel flowpath module (page 12) can be used to approximately double the flow rate.

KBF valves are preset at the factory to compensate for the effect of spool overlap.

Curves shown include deadband compensation provided for the KF valve by the Vickers Eurocard Amplifier EEA-PAM-533-*.-32 (user adjustable).

At other Δp values and within the power capacity envelopes, flow rates approximate to:

\[ Q_x = Q_d \sqrt{\frac{\Delta p}{\Delta p_d}} \]

where \( Q_d \) = Datum flow rate
\( \Delta p_d \) = Pressure drop at datum flow rate
\( \Delta p_x \) = Required \( \Delta p \)

Frequency Response (Typical)

For an amplitude of \( \pm 25\% \) max. stroke about the 50% position, at \( \Delta p \) (P-B) = 5 bar (72 psi)

\[\blacktriangledown\]
**Mounting surface seals supplied**

\[\blacktriangledown\] Note: Bleed screw locations Air bleed, Socket Head Cap Screw.
Torque to 2.5-3.0 Nm (2.0-2.5 lbf ft)

**NOTE:** For optimum valve operation, bleed the air from the proportional solenoids at initial start-up. This may be done as follows:
- The valve may be pressurized by removing the bleed screws until no bubbles appear and then reinstalling bleed screws, or...
- Remove both bleed screws, and use a standard oil can nozzle to pump fluid in one side until it flows, free of air bubbles, out the other side. Reinstall screws.

If there is no inherent back pressure in the tank port of the circuit do not allow the tank line to empty. This may be prevented by installing a check valve in the tank line. The cracking pressure of the check valve should be in the range of 22 - 45 psi (1.5 - 3 bar)

Amplifier and solenoid may be rotated 90° as shown by removing 4 screws shown X. Re-torque to 7-9 Nm (6-7 lbf ft)

Warning

Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2-2.5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

For mounting surface dimensions and sub-plate options, see page 12.

*: Note: Bleed screw locations Air bleed, Socket Head Cap Screw. Torque to 2.5-3.0 Nm (2.0-2.5 lbf ft)

Mounting surface seals supplied
Parallel Path Flow Module

Size 03 Parallel-Flow-Path Module
KDGM-3-616265-1*

Typically used for doubling effective flow capability of single solenoid proportional valves (throttle valves), as illustrated in “Typical Applications”.

▲ A, T_A, and T_B ports at subplate face are blind holes fitted with O-seals.

Subplates and Mounting Surfaces

General Description
If a subplate is not used, a machined pad must be provided for valve mounting. Pad must be flat within 0.0127 mm (.0005 inch) and smooth within 1.6 μm (63 microinch). Mounting bolts, when provided by customer, should be ISO 898 class 12.9 or better.

Dimensional Tolerances
Dimensional tolerance on interface drawings is ±0.2 mm (±0.008") except where otherwise stated. ISO 4401 specifies inch conversion to ±0.01".

Conversion from Metric
ISO 4401 gives dimensions in mm. Inch conversions are accurate to 0.01" unless otherwise stated.

Mounting Bolt Tappings
ISO 4401 gives metric thread tappings. Alternate UNC tappings are Vickers recommendations that allow these plates and associated valves to be used up to their maximum pressures, when using Vickers recommended bolt kits, or bolts of an equivalent strength. It is recommended that Customer’s own manifold blocks for UNC bolts should be tapped to the minimum depths given in the footnotes.

234. Mounting Surface to ISO 4401 (Size 03)
This interface conforms to:
ISO 4401-03-02-0-94 plus location pin hole
ANSI/B93.7M (and NFPA) size 03
CETOP R35H4.2-4-03, plus location pin hole
DIN 24340 Form A6 plus location pin hole

#10-24 UNC-2B optional.

Note: In valves with PH7 or PR7 type electrical connection, pin C is used for a valve enable signal.

**Wiring**

Connections must be made via the 7-pin plug mounted on the amplifier. See page 15 of this leaflet and Installation Wiring Practices for Vickers Electronic Products, leaflet 2468. Recommended cable sizes are:

**Power cables:**

For 24V supply
- 0,75 mm² (18 AWG) up to 20 m (65 ft)
- 1,00 mm² (16 AWG) up to 40 m (130 ft)

**Signal cables:**

0,50 mm² (20 AWG)

**Screen (shield):**

A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen.

Cable outside diameter 8,0–10,5 mm (0.31–0.41 inches)

See connection diagram on next page.
Wiring Connections for Valves with Enable Feature

In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7 pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

Warning
Electromagnetic Compatibility (EMC)
It is necessary to ensure that the valve is wired up as above. For effective protection the user electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points. The metal 7 pin connector part no. 934939 should be used for the integral amplifier.
In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.
It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines.
The enable line to pin C should be outside the screen which contains the demand signal cables.
Fluid Cleanliness

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Recommendations on contamination control methods and the selection of products to control fluid condition are included in Vickers publication 9132 or 561, "Vickers Guide to Systemic Contamination Control". The book also includes information on the Vickers concept of “ProActive Maintenance”. The following recommendations are based on ISO cleanliness levels at 2 μm, 5 μm and 15 μm.

For products in this catalog the recommended levels are:
0 to 70 bar (1000 psi) 18/16/13
70 + bar (1000 + psi) 17/15/12

Vickers products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed below. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

Hydraulic Fluids

Materials and seals used in these valves are compatible with antwear hydraulic oils, and non-alkyl-based phosphate esters. The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

Installation

The proportional valves in this catalog can be mounted in any attitude, but it may be necessary in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid. Good installation practice dictates that the tank port and any drain port are piped so as to keep the valves full of fluid once the system start-up has been completed.

Mounting Bolt Kits

For K(B)FD/TG4V-3
BK02-156493M (metric)
BK590716 (inch)

If not using Vickers recommended bolt kits, bolts used should be to ISO 898, 12.9 or better.

Seal Kits

KFD/TG4V-3 565108
KBF/DG4V-3-1* 02-332693

Plugs

KFDG4V
7-pin plug (metal) 934939
7-pin plug (plastic) 694534

(Note: Metal plug must be used for full EMC protection)

Extension Cable

Extension Cable: Adapter for extending 7 core cable when changing from KA to KB valve and existing wiring is not long enough. Consists of a 7 pin plug, a 7 pin socket and a length of cable, fully assembled for ease of use
Extension Cable 944450

Service Information

The products from this range are preset at the factory for optimum performance; disassembling critical items would destroy these settings. It is recommended that if any mechanical or electronic repair is necessary, valves should be returned to the nearest Vickers repair center. The products will be refurbished as necessary and retested to specification before return.

Field repair is restricted to replacement of the seals.

Note: The feedback/solenoid assembly installed in this valve should not be disassembled.
